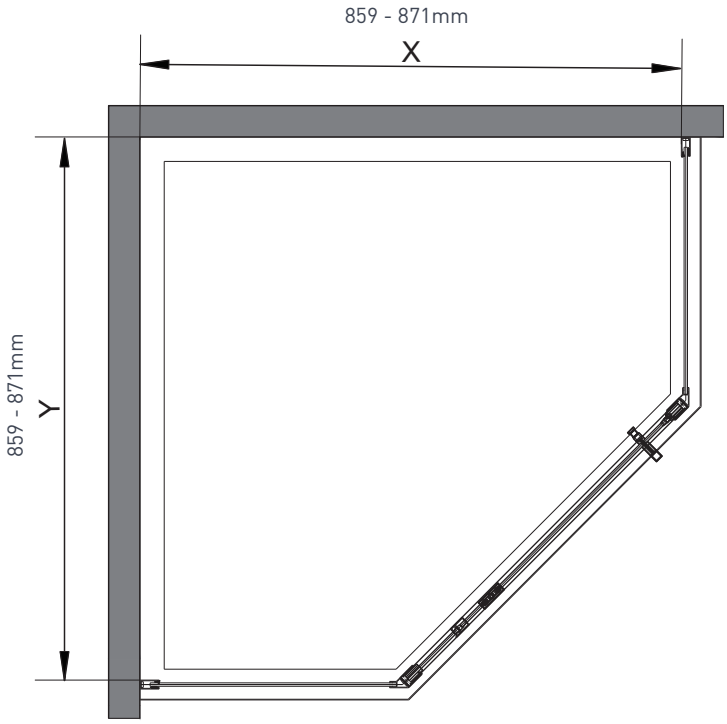
DETERMINING WALL CHANNEL LOCATION

When commencing step 1 on the following page, please refer to this drawing and the tabulated dimensions to assist in the correct location of the wall channels.



- Use the value for X and Y on the same line to find the distance from the shower wall to the outside edge of the wall channels. If a shower base is fitted, do not measure from the edge of the shower base to determine the position of the wall channel.
- If your wall and shower base are not at right angles the glass will not push fully into the wall channel at the top or bottom. This misalignment is acceptable if not exceeding 15mm, however the overall shower size will then increase by the amount of this misalignment.
- If the screen footprint does not turn out square while the aluminium braces are being installed (step 3), the glass can be pulled out from the full depth of the channel by up to 15mm to assist in squaring.
